MOTORCYCLE WHEEL ASSEMBLY STATION
WITH AUTOMATIC NIPPLE FEEDER

ML 2004 - SEMI AUTOMATIC MOTORCYCLE WHEEL ASSEMBLY MACHINE

- Machine suitable for all kind of spokes wheels
- Horizontal, very sturdy and compact unit, with a nice design, that allow to the Technician to work in a very comfortable and ergonomic position.

The machine is made up of the following main groups:

- Automatic nipple feeding group, particularly reliable and efficacy, placed on the machine in a position that allow an easy nipple feeding to the screwing group
- Screwing group with a special head for nipple holding and with a nipple driving device (Patented) that hold and move the nipple in the right position up to when it has been screwed; in this way we NEVER have the loss of nipple during the operation
- Spoke driving group and nipple recall with automatic spoke screwing departure through a sensor
- Special hub holding articulated group. It allows to have an easier operation; suitable for any kind of hub.
- Adjustable rim holding group, suitable for all kind of rims
- Screwing group through DC motor, electronically adjustable both for screwing quantity and for screwing speed
- Control panel with a display for storing all kind of wheels, complete with self-diagnostic (TOUCH SCREEN SYSTEM)
- Electronic group for the control of the whole machine with Siemens PLC (the last model)
- Very sturdy mechanical groups, built with suitable and treated steels to offer the most reliability
- Quick changeover
- Optional: double automatic feed loader

TECHNICAL CHARACTERISTICS :

- | | |
|---------------------------------------|---|
| - Compressed air feed | : 6 BAR |
| - Voltage | : 220/230 V (transformer for other voltages on request) |
| - Power supply | : 50/60 Hz |
| - Power consumption | : 0.8 kW |
| - Database for 200 different wheels | |
| - High capacity | |
| - Range: 10 " to 21 " wheel diameters | |
| - Sound level: <70 db | |
| - Dimensions | : 210 x 140 x 170 H cm. |
| - Weight | : 650 KG |
